Yahir Eduardo Bravo Tafur

Software Engineer — Backend & Software Architecture

Tuluá, Valle del Cauca — Colombia | github.com/yebt | yebt.dev

SUMMARY

Software engineer with 4 years of experience designing, building and deploying web applications, with a focus on backend and software architecture. Currently Lead Developer leading three projects in parallel (e-commerce, CRM and a record-linking system). I apply design patterns and architecture principles (SOLID, layered/hexagonal boundaries, separation of concerns) to keep systems maintainable, and I build internal tools that cut manual work and turnaround times across several areas of the company. I value clear communication, code review culture and realistic, measurable goals.

EXPERIENCE

Lead Developer — Webclostrer SAS — IT

Oct 2024 — Present | Tuluá, Colombia

- Lead three concurrent projects (e-commerce, CRM, record-linking system) and a team of 3 developers (1 onsite, 2 remote), owning architecture, code review and delivery.
- Design and implement backend and front-end solutions applying design patterns and architecture principles, balancing scalability, maintainability and delivery speed.
- Reduced deployment time from 30 to 5 minutes with custom deployment scripts, enabling faster and safer release cycles.
- Cut page load time from ~4 s to ~1.1 s through template refactoring, query optimization and caching strategies; improved SEO and Lighthouse scores on key landing pages.
- Built internal tools (cross-database record validation, task automation) adopted by several areas of the company, reducing manual effort, errors and turnaround times.
- Improved incident response with a Sentry → Telegram alerting integration, giving the team real-time visibility of production errors.
- Own deployments and merge-request reviews; streamlined onboarding by containerizing environments with Docker.
- Negotiate requirements with stakeholders and product, and run requirement walkthroughs and system overviews that improved task clarity and delivery speed.

Junior Developer — Webclostrer SAS — IT

Nov 2022 — Oct 2024 | Tuluá, Colombia

- Contributed to an e-commerce platform, order management system, biographical data system, authentication services and event control modules.
- Improved reliability by integrating Sentry for error monitoring, enabling faster detection and resolution of runtime errors.
- Introduced unit and integration tests on critical components, and resolved key data-integrity issues in authentication and order management.
- Dockerized application environments and shipped updates with minimal downtime.

Private Tutor — Mathematics and Programming (C++, Scheme) — Universidad del Valle

Nov 2020 — Nov 2022 | Tuluá, Colombia

SKILLS

Backend: PHP (Laravel, Slim), Node.js, Bun, REST APIs, Authentication

Architecture: Design patterns, SOLID, Layered / hexagonal architecture, Domain modelling, Caching strategies

Databases: MySQL, PostgreSQL, SQLite, Query optimization

DevOps: Docker, Linux, CI/CD, Deployment scripting, Sentry

Scripting: Bash, Python, Lua, Make

Front-end: JavaScript, Vue.js, Astro, HTML, CSS, Tailwind CSS

Practices: Code review, Git (GitHub, GitLab), Unit & integration testing, Technical leadership

EDUCATION

Systems Engineering (B.Eng.) — Universidad del Valle | 2017 — 2022

Course — JavaScript, Vue.js, Astro — Platzi | 2023

Course — Laravel — Udemy | 2022

Course — PHP — Udemy, Platzi | 2021 — 2022

LANGUAGES

Spanish (Native), English (B1 — professional working)
